SUMMARY

AI/ML and Backend Engineer with experience building intelligent applications, distributed backend systems, and security-focused solutions. Strong foundation in Java, Spring Boot, Python, REST APIs, microservices, databases, and event-driven architectures. Hands-on exposure to cybersecurity through Wazuh-based SOC monitoring, network security, log analysis, attack detection, and MITRE ATT&CK mapping. Experienced with machine learning, NLP, GenAI, RAG, and ML model development.

TECHNICAL SKILLS

Languages: Java, Python, C++, SQL

Backend: Spring Boot, Spring Security, REST APIs, Microservices, WebSocket, JWT, Hibernate/JPA

AI/ML: Machine Learning, Deep Learning, NLP, GenAI, LLMs, RAG, LangChain, LangGraph, Prompt Engineering

Cybersecurity: Wazuh SIEM, SOC Monitoring, Log Analysis, Incident Investigation, Suricata, Nmap, Hydra, MITRE ATT&CK

Databases: PostgreSQL, MySQL, MongoDB, Redis

Messaging & Distributed Systems: Apache Kafka, Event-Driven Architecture, Pub/Sub, Distributed Systems, Scalability, Caching

Cloud / DevOps: AWS, Docker, Kubernetes, GitHub Actions, CI/CD

CS Fundamentals: Data Structures & Algorithms, OOP, System Design, SOLID, Design Patterns, Concurrency

PROJECTS

SentinelSOC | *Wazuh-Based SOC Home Lab* | [GitHub](#)

2026

Wazuh, Suricata, Kali Linux, Ubuntu Server, Nmap, Hydra, MITRE ATT&CK

- Built a controlled SOC home lab using Wazuh SIEM for centralized security monitoring, log analysis, alert detection, and investigation.
- Simulated SSH brute-force activity and Nmap reconnaissance using Kali Linux and analyzed generated authentication and network events.
- Integrated Suricata for network intrusion detection and mapped detected activities to MITRE ATT&CK techniques including T1110 and T1046.
- Designed an alert-investigation workflow covering source identification, log analysis, attack classification, severity assessment, and reporting.

SwasthAI | *AI-Powered Medical Data Platform* | [Live Demo](#)

2025 – Present

Python, Flask, Spring Boot, React.js, Apache Kafka, PostgreSQL, Redis, Docker

- Developed an AI-powered medical platform for analyzing medical reports and presenting health information through an interactive web interface.
- Implemented backend REST APIs and asynchronous event processing using Kafka for communication between distributed application components.
- Integrated OCR and machine-learning pipelines to extract and process information from uploaded medical documents.
- Used PostgreSQL and Redis for persistent storage and caching while containerizing application services with Docker.

EDUCATION

GL Bajaj Institute of Technology & Management
B.Tech in Computer Science (AI & ML) — GPA: 8.0 / 10.0

Noida, India
2023 – Present

ACHIEVEMENTS & CERTIFICATIONS

- **Amazon ML Summer School 2026** — Selected among 134,000+ applicants to be one of 3,000 participants.
- **Solved 350+ DSA Problems** — LeetCode; strengthened algorithmic problem-solving and competitive programming skills.
- **DecodeX National Hackathon Finalist** — Selected from 4,000+ participants; developed a distributed backend solution within 24 hours.
- **Cybersecurity Certifications** — Cybersecurity Foundations, Network Security Fundamentals, Security Operations Fundamentals, Security Operations Configuration, Cloud Security Fundamentals, and Cloud Security Automation.
- **JPMorgan Chase & Co.** — Software Engineering Virtual Experience Program.
- **Walmart Global Tech** — Advanced Software Engineering Simulation.
- **NVIDIA Deep Learning Institute** — Fundamentals of Deep Learning.
